PHP MELODY
YOUR VIDEO CMS

Update Manual

Version 2.6.1 to 2.7 Update

Hello

You are about to update your PHP Melody installation to **version 2.7** released on **May 20th, 2016**. Let's get started.

1 Backup your files and MySQL database

Generate a full backup of your site from your cPanel, Plesk or hosting account. Alternatively, save all existing PHP Melody files and export your MySQL database **manually** via phpMyAdmin. It's recommended to check the exported .SQL file to ensure you have a complete export.

2 Uploading the update package via FTP

Open the `PHP-Melody-27-Update-Pack` folder from this package and **upload its contents** to your existing PHP Melody v2.6.1 installation, **overwriting all existing files and folders**.

After uploading the files log into your PHP Melody back-end (admin area) and follow the instructions to complete the last step of the update procedure: updating the MySQL database.

Important!
This update works only with PHP Melody v2.6.1 *If you are using an older version, please bring it up to date by downloading the appropriate **update** package from your Customer Area account:* https://www.phpsugar.com/customer/

An in-depth update guide with FAQ and Troubleshooting is available at:
http://help.phpmelody.com/the-ultimate-guide-to-updating-php-melody/

3 Final notes

Finally, here's list of things we recommend checking after applying this update:

- **Layout** (remember: if you have a premium PHP Melody theme you need to **download** and use the latest theme version from your Customer Area account).
- **Functionality** (test the new features to ensure everything works with your particular hosting/server configuration).

If you have any question or encounter any issues, <u>contact our support team</u>. We're always happy to help you!

Thank you & Enjoy PHP Melody!
